Amendments to the Claims:

Please kindly amend the claims as follows. This listing will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

- 1. (Currently amended) A vaccine An immunogenic composition capable of eliciting neutralizing antibodies in a subject to a pathogenic organism which antibodies are present in vaginal secretions, intestinal secretions, lung secretions or feces, which composition comprises:
 - (a) an antigen comprising a protein or peptide having
 - (i) an endogenous hydrophobic sequence of between about 3 and, about 50 non-polar or uncharged amino acids;
 - (ii) added to the protein or peptide, an exogenous hydrophobic material comprising a sequence of between about 3 and about 50 non-polar or uncharged amino acids or a C8-C18 fatty acyl group; or
 - (iii) both (i) and (ii),
 - (b) complexed with said antigen, a composition comprising proteosomes, bioadhesive nanoemulsions, or both, wherein said composition is complexed or coupled with (a),

wherein said complexed or coupled protein or peptide maintains a native structure of antigenic epitopes such that, upon administration to said subject, the antigen induces neutralizing antibodies in one or more of vaginal secretions, intestinal secretions, lung secretions and feces, eapable of neutralizing said pathogenic organism.

George H. LOWELL, et al. Application No.: 09/938,406

- 2. (Withdrawn) A vaccine composition according to claim 1 wherein the endogenous hydrophobic sequence or the exogenous material is a sequence of about 5 to about 29 amino acids.
- 3. (Currently amended) A vaccine An immunogenic composition according to claim 1 wherein the exogenous hydrophobic material is a C8-C18 fatty acyl group.
- 4. (Currently amended) A vaccine An immunogenic composition according to claim 3 wherein the exogenous hydrophobic material is lauroyl.
- 5. (Withdrawn) A vaccine composition according to claim 1 wherein the exogenous hydrophobic material is Phe Leu Leu Ala Val or Val-Aia-Leu-Leu-Phe.
- 6. (Currently amended) A vaccine An immunogenic composition according to claim 1 wherein the antigen [[is a]] is a peptide or a peptide oligomer.
- 7. (Currently amended) A vaccine An immunogenic composition according to claim 1 wherein the protein is a viral envelope protein.
- 8. (Currently amended) A vaccine An immunogenic composition according to elaim 5 claim 7 wherein the viral envelope protein is an oligomeric gp160 from human immunodeficiency virus.
- 9. (Currently amended) A vaccine An immunogenic composition according to claim 8 wherein said oligomeric gp160 has the sequence of residues 33-681 of SEQ ID NO: 1.
- 10. (Currently amended) A vaccine An immunogenic composition according to claim 1 wherein the protein or peptide is recombinantly produced.

George H. LOWELL, et al. Application No.: 09/938,406

- 11. (Currently amended) A vaccine An immunogenic composition according to claim 1 wherein the antigenic protein or peptide natively contains at least one cysteine residue or has at least one added cysteine residue.
- 12. (Currently amended) A vaccine An immunogenic composition according to claim 1 wherein the proteosomes are hydrophobic, multimolecular membrane proteins.
- 13. (Currently amended) A vaccine An immunogenic composition according to claim 1 formed by:
 - (a) bonding the hydrophobic material to said protein or peptide to form a hydrophobic-hydrophilic compound; and
 - (b) admixing said compound with said proteosomes, bioadhesive nanoemulsions, or both such that said antigen is complexed with said proteosomes or nanoemulsion.
- 14. (Currently amended) A vaccine An immunogenic composition according to claim 13 wherein said admixing step is performed in the presence of a detergent, and is followed by the step of
 - (c) removing the detergent by dialysis.
- 15. (Currently amended) A vaccine An immunogenic composition according to claim 13 wherein said admixing step is performed lyophilization.
- 16. (Currently amended) A vaccine An immunogenic composition according to claim 1 formulated for intranasal or respiratory administration.

PATENT

George H. LOWELL, et al. Application No.: 09/938,406

- 17. (Currently amended) A vaccine An immunogenic composition according to claim 1 wherein the vaccine is in a dosage form suitable for multiple inoculations.
- 18. (Currently amended) A vaccine An immunogenic composition according to claim 1 wherein the pathogenic organism is a causative agent of a mucosally-transmitted or sexually transmitted disease.
